Speaker Bios

Morgan Templar is the author of the best-selling book, "Get Governed: Building World Class Data Governance Programs." She is the CEO of Get Governed LLC.

She has over twenty years experience in managing information assets and analytic programs with a strong focus on healthcare data. She is an expert in regulatory and accreditation compliance.

As a data governance teacher and coach, she brings a common-sense point of view to develop realistic and achievable strategies and roadmaps with a focus on people rather than systems.

Ken Lownie is the head of Everteam's business in North America. In that role, he is responsible for ensuring the success of every US customer.

Ken has been implementing enterprise software solutions at large organizations for more than twenty years. Much of his experience is in implementing systems that address compliance requirements in highly-regulated organizations.

The New Information Governance Imperative

Building the Strategic IG Initiative

Identifying Quick Wins

Three Examples of Quick Wins

Selecting Governance Software

The New Information Governance Imperative

- Regulatory compliance *pressures are growing*.
 - ❖ A new focus on Privacy
- Risk and cost of storing unneeded and *obsolete information in unmonitored "Shared Drive"* environments and obsolete applications
- In spite of this new Information Governance Imperative, it can still be challenging to get these projects *above the funding line*.
- Combine the strategy and framework of IG with short-term, quick-win tactical projects and *demonstrate results*

Poll 1

Three Main Impacts of Governance

- Regulatory or Accreditation requirements
- Data Quality Impacts
- Customer Experience

Regulatory or Accreditation Requirement Impacts

- Remediation of Negative Findings of a recent audit is paramount
- Projects tied to meeting Regulations or Accreditation requirements are more likely to be funded
- Future regulations that must be complied with

Data Quality Impacts

Customer or
Stakeholder
complaints

Known or perceived
inconsistencies in
data

Audit findings
within operations

Customer Experience Impacts

- Data that is fed to customers
- Customer Complaints
- Ensure a consistent experience across all platforms – web, app, telephone

The New Information Governance Imperative

Building the Strategic IG Initiative

Identifying Quick Wins

Three Examples of Quick Wins

Selecting Governance Software

Establish a consistent
strategic framework

“It all starts by
knowing what
information is
important to
measure”

- Morgan Templar

Identify Key Performance Indicators

Identify KPI's that are consistent across teams such as:

- 90% quality on data entry
- Automation % by function
- Customer Experience approval rating of "x"

Understand the information needed to measure the KPI that is impacted by an initiative

Think beyond your team or department in an end-to-end manner

- “How is this information used downstream?”
- “Who created and/or contributed to the information upstream?”
- “Initiatives should include the stakeholders of the entire life-cycle of information”

“Get in the habit of
being inclusive of
all Stakeholders
creating a

CULTURE OF COLLABORATION

This is critical for
successful
governance.”

-Morgan
Templar

Socialize the Vocabulary and Outcomes of Governance as you work on Initiatives

- Call people by their titles: Are you working with a 'Stakeholder' or a 'Data Steward'?
- When framing messages include references to the 'data dictionary,' 'data glossary,' 'data lineage,' and/or 'data model'
- Include a "Governance Impacts" section in weekly status reports
- Ensure that outcome reporting rolls up to the highest levels

Techniques to secure the support of Stakeholders

“Long-term Stakeholder buy-in is a matter of building and maintaining trust”

-Morgan Templar

Stakeholder Trust is Built with Communication

- Involve them in planning from early stages
- Ensure that their inputs are clearly articulated and reported on
- Be clear when something is beyond the scope of the project and help them find the right mechanism to get their ideas approved
- Have a clear communication plan and RASCI* for the project that includes governance roles
- Demonstrate the value of the Governance Framework to the stakeholders for continued support

*RASCI: Responsible; Accountable; Supporting; Consulted; Informed

Three Examples of Quick Wins

Dark Content

1

The Dark Side

Challenges with Information Assets

- Exploding volume of corporate information created, stored and consumed
- Data Privacy issues: Personal Data (GDPR definition) PII, PHI, PCI, etc.
- Data Residency issues
- Information scattered across many systems
- Dark Content
- Information Assets not created equal (different Categories such as Business Records, ROT, ESI, etc.) and thus may require different rules to handle them.

Information Assets scattered across the Enterprise

Shared Drives, SharePoint, Cloud Repositories, ECM Systems, Email Servers and Archives, Business Applications, etc.

Costs of Dark Content

Corporate Knowledge

- Loss of value & insight about Information Assets

Growing IT Costs

- Storage of content
- Barriers for legacy application decommissioning
- Barriers to cloud adoption, especially EFS

Increased Legal Risks and Costs

- Increased legal & non-compliance risks and costs
- More barriers & increased risks for GDPR compliance
- More barriers & increased risks for M&As

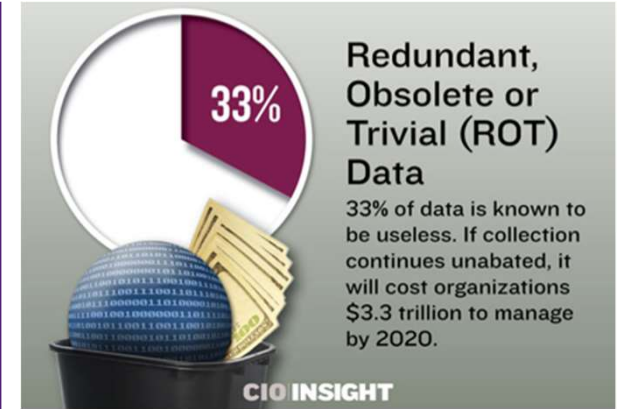

Illuminating Dark Content with AI Tools

File and Content Analytics

Use of faceted search and text analytics techniques to find...

- Duplicate files
- Obsolete items
- Sensitive and Private Information

Three Examples of Quick Wins

Decommission

2

Compliance Gap

3

A word cloud centered around the acronym 'GDPR'. The words are arranged in a roughly circular shape, with 'GDPR' being the largest and most central. Other prominent words include 'consent', 'general', 'data', 'protection', 'secure', 'controller', 'compliance', 'prepare', 'processor', 'transfer', 'access', 'legislation', 'rules', 'information', 'filing system', 'business', 'personal', 'EU', 'safeguard', 'password', 'european union', 'legislation', 'rules', 'information', 'filing system', 'business', 'personal', 'EU', 'safeguard', 'password', 'european union'. Smaller words include 'compliant', 'company', 'supervisory authority', 'act', 'third party', 'safety', 'security', 'law', 'regulation', 'fine', 'breach', 'privacy', 'technology', 'confidential', 'officer', 'protect', 'transfer', 'access', 'legislation', 'rules', 'information', 'filing system', 'business', 'personal', 'EU', 'safeguard', 'password', 'european union'. The colors are primarily shades of blue and teal, with some words in a lighter blue or white.

GDPR

consent, general, data, protection, secure, controller, compliance, prepare, processor, transfer, access, legislation, rules, information, filing system, business, personal, EU, safeguard, password, european union, compliant, company, supervisory authority, act, third party, safety, security, law, regulation, fine, breach, privacy, technology, confidential, officer, protect, transfer, access, legislation, rules, information, filing system, business, personal, EU, safeguard, password, european union

The New Information Governance Imperative

Building the Strategic IG Initiative

Identifying Quick Wins

Three Examples of Quick Wins

Selecting Governance Software

Poll 3

Buyer Beware: Choosing Governance Software

- Beware of “Platforms”
 - Information has to be managed ACROSS systems, not just WITHIN one system
 - Flexible Toolsets will deliver More Value
 - Focus on the use cases
- Look for Embedded “AI”
 - Machine learning and Natural Language Processing Capabilities are Critical
- Get Comfortable with a New Class of Vendors
